What is Colorectal Surgery?

Colorectal surgery is a surgical procedure that is performed to treat diseases of the colon and rectum. These diseases can include:

* Colorectal cancer * Diverticulitis * Inflammatory bowel disease * Fistulas * Hemorrhoids

Colorectal surgery can be performed laparoscopically, robotically, or through an open incision. Laparoscopic and robotic surgery are less invasive than open surgery, and they offer a number of benefits, including:

* Smaller incisions * Less pain * Faster recovery * Reduced risk of infection

Types of Colorectal Surgery

The type of colorectal surgery that is performed will depend on the underlying disease. Some of the most common types of colorectal surgery include:

* Colectomy: This procedure involves removing a section of the colon. * Rectal resection: This procedure involves removing a section of the rectum. * Ostomy: This procedure involves creating an opening in the abdomen to allow stool to pass out of the body. * Fistulotomy: This procedure involves opening up a fistula to allow it to drain. * Hemorrhoidectomy: This procedure involves removing hemorrhoids.

Recovery from Colorectal Surgery

The recovery time from colorectal surgery will vary depending on the type of procedure that was performed. Laparoscopic and robotic surgery typically have a shorter recovery time than open surgery. Most patients will be able to go home within a few days after laparoscopic or robotic surgery,

while patients who have open surgery may need to stay in the hospital for a week or more.

After surgery, you will need to follow your doctor's instructions carefully. This will include taking medication, eating a healthy diet, and getting plenty of rest. You will also need to avoid strenuous activity for several weeks.

Risks of Colorectal Surgery

As with any surgery, there are some risks associated with colorectal surgery. These risks include:

* Bleeding * Infection * Blood clots * Damage to the nerves or organs near the colon or rectum * Death

The risks of colorectal surgery are relatively low, but they are important to be aware of before you decide to have surgery.
